

AUDIENCE RESPONSE SYSTEMS

Turning Point Audience Response System

TurningPoint, our award-winning leading student response system, encourages interactive participation as well as dynamic discussions. With seamless PowerPoint® integration, TurningPoint delivers immediate interactive response functionality to audiences and presenters. Presenters can utilize this technology to evaluate the collective understanding of the entire audience and track individual student learning at the point of instruction. Use TurningPoint interactive questions for reviewing assigned materials, confirming attendance, awarding participation points, and more. Automatically created to run reports for virtually all your needs; from individual participation to entire section results, or evaluate results based on demographics or work groups.

Optimized for all size classrooms, as well as boardrooms and focus group environments, the ResponseCard RF is light and compact enough for teachers, consultants, and presenters to carry them from room to room or with them during travel. Keypads and receiver fit into a custom binder for easy portability. TurningPoint, interactive PowerPoint software, can achieve two-way verification with the ResponseCard systems via a displayed response grid on the screen. As each participant submits a response or changes a previous response their keypad ID will acknowledge the response by changing its appearance. Educators and presenters will know immediately the participation level of their group. TurningPoint is ideal for encouraging participation in any size classroom or meeting from small enrollments of 10-15 to large enrollment classes of 250 or even 1,000s!

Advantages of Turning Point Keypads:

- Lightweight, compact, grey "credit card" format.
- Dimensions: 3.3" L x 2.1" W x 0.3" H
- Weight: 0.75 oz (without batteries), 1.0 oz (with batteries).
- Durable, rugged case ensures maximum longevity under extreme conditions.
- ResponseCard uses infrared technology similar to a TV remote. Its proven, reliable technology operates on a "line of sight" making setup and operation very easy in unlimited numbers of classrooms.
